AI-POWERED BRAND GOVERNANCE

# BrandLens

## Complete Website & Product Guide

Company context. Role-aware checks. Better content.

**Review**
Does the content fit the company, audience and author role?

**Improve**
Focused suggestions for clearer, more responsible content.

**Prepare**
Recheck edits and move toward an approved next step.

THE CENTRAL IDEA

BrandLens is not just a grammar checker. It adds company and role context to review so creators catch risky claims, improve the message, and keep a human in control.

01 · START HERE

# What is BrandLens?

Think of a careful colleague who reads your post before it goes live. BrandLens does that with AI: it checks the wording, but also whether the claim is true, allowed and suitable for the platform.

## FOUR QUESTIONS IT ASKS ABOUT EVERY DRAFT

**1 · Does it fit the company?**
The topic must belong to the real business and approved facts.

**2 · Is the author allowed to say it?**
A pricing promise may need a manager's sign-off.

**3 · Is the tone right?**
A casual post may not suit a professional LinkedIn audience.

**4 · Can the claim be proven?**
Big promises need a source, or they are marked "verify".

## WHAT GOES WRONG WITHOUT IT

| | |
|---|---|
| **Outdated facts** | Old prices, expired offers or features that no longer exist. |
| **Unsupported promises** | Words like "guaranteed" or "100% free" with nothing behind them. |
| **Role mismatch** | Someone commits the company to something they can't approve. |
| **Hidden media risks** | An image shows private data or text nobody can read. |

**IN PLAIN WORDS**

A spell-checker fixes typos. BrandLens asks: "Should this be said, by this person, in this way?" You stay in control: it suggests, you decide.

# Where to find things

The site has one main workflow (New Post) and a set of quick tools (Enhancer).

| | |
|---|---|
| **New Post** | The full workflow: write a title and caption, pick the platform, add media and get a review. Use it when you want a decision on a real post. |
| **Pending** | Posts waiting for a decision or next step. Use it to see what still needs attention. |
| **History** | Saved posts and earlier review results, so you can look back. |
| **Dashboard** | A quick overview of current work and review status. |
| **Enhancer · new** | Separate tools for one-off jobs, with no full post needed. |

Help and About appear as “Soon” in the captured screen. Check the live version for availability.

## WHICH ONE SHOULD I START WITH?

| | |
|---|---|
| **I’m preparing a post** | New Post: you get a full governance check. |
| **I have a paragraph** | Enhancer > Text Review: a cleaner version. |
| **I have an image** | Enhancer > Image Review: feedback on the picture. |
| **I need a visual idea** | Enhancer > Image Generate: a starting graphic. |
| **I have a PDF or Word file** | Enhancer > Text Extract: pull the text out. |

# From draft to approved

Seven simple steps. A person makes the final call.

1. **Draft**
   Pick the platform, then add your title, caption and image.
2. **Check**
   Run the AI review on your text and title.
3. **Understand**
   Read what was flagged, why, and what to do about it.
4. **Improve**
   Apply a suggestion only if it fits what you mean.
5. **Recheck**
   Run the review again after any edit, so results match your latest text.
6. **Approve**
   Send it to the right person if approval is needed.
7. **Prepare to publish**
   Publish only through a connected, authorised account, if set up.

**IN PLAIN WORDS**

Always recheck after editing. The app warns you when text changed since the last review, because an old warning may no longer apply and a new edit can add a new problem.

**STATUS WORDS MATTER**

**Ready to Post** means reviewed and prepared. **Posted** means the platform confirmed it went live. They are not the same.

04 · REAL EXAMPLE

# One draft, four checks

Demo workspace: Nova Unlimited, a server and hosting company. The claim is an illustration, not a statement about their real offers.

THE DRAFT · BY AN EMPLOYEE · FOR LINKEDIN

"We provide our users 100% free servers."

| | | |
|---|---|---|
| **A · Company fit** | Servers are the company's business, so the topic belongs. | PASS |
| **B · Role scope** | An employee can't promise "free" terms without an administrator's sign-off. | MISMATCH |
| **C · Platform tone** | Casual wording is below the precise B2B voice LinkedIn needs. | FORMAT |
| **D · Facts** | "100% free" must be checked against official pricing. It can't be assumed true. | NEEDS VERIFY |
| **Overall result** | | BLOCKED · NEEDS ATTENTION |

SAFER REWRITE SUGGESTED

"Explore our server hosting options and review the specifications, capabilities, and applicable terms to find the right setup for your needs."

IN PLAIN WORDS

A good review doesn't just say "bad post". It tells you why (topic, authority, tone or proof) so you fix the right thing. The rewrite invents no price or guarantee.

05 · ENHANCER

# Quick tools, no full post needed

A separate tab for one-off jobs. Use it before New Post to polish things first.

### Text Review

**Use when:** You have a title, caption or paragraph that's unclear, repetitive or too casual.

**You get:** A clearer version that keeps your meaning, with the key edits explained.

### Image Review

**Use when:** You want a second look at a picture before using it.

**You get:** A summary, readable text, privacy flags (phone, email, ID) and risk notes. Unclear cases go to a person.

### Image Generate

**Use when:** You need a visual idea and don't want a blank canvas.

**You get:** A concept image from your description. Check any text or claims it draws.

### PDF / DOCX Extract

**Use when:** The words are stuck in a document.

**You get:** The document text, ready to reuse. Scanned pages may need OCR and may miss words.

A GOOD ORDER OF WORK

Extract or draft → Enhance → Review image → New Post check → Approve

IN PLAIN WORDS

Extraction only copies text. It doesn't check if it's true. Old documents can hold outdated claims, so verify before reusing.

06 · TRUST

# Safe, honest and human-led

BrandLens helps people decide. It never decides alone.

**Evidence over guessing**
Unproven claims are marked “verify”, not called false.

**You stay in control**
Suggestions are optional. People approve.

**Limits are visible**
No perfect OCR. Unclear images go to manual review.

**Secrets stay private**
API keys and tokens live on the server, never in the page.

## BEFORE YOU PUBLISH, ASK

1. Are the facts and offers current and backed by a trusted source?
2. Is the author allowed to make this announcement?
3. Does the tone fit the audience and platform?
4. Is the media free of private or misleading text?
5. Was the final edit rechecked and approved?

## QUICK GLOSSARY

| | |
|---|---|
| **Role scope** | What a person may say or promise for the company. |
| **Unsupported claim** | A statement with no verified source behind it. |
| **Manual review** | A person checks it because judgement matters. |

**Review with context. Improve with confidence.**
Keep the human decision where it belongs. BrandLens is decision support, not legal advice or a guarantee.
